Project idea for a Manufacturing Execution System (MES)

1. Industry

A system for a **bakery** to track bakery products, manage customer orders, log oven operational status, production status and handle staff login.

2. Database Tables & Schema

Product	Oven	Order	Staff
ProductId (INT, PK) ProductName (VARCHAR) ProductCategory (VARCHAR) ProductNumber (VARCHAR) UnitPrice (DECIMAL)	OvenId (INT, PK) OvenNumber (VARCHAR) Temperature (INT) OperationalStatus (VARCHAR)	OrdersID (INT, PK) CustomerName (VARCHAR) ProductId (INT, FK) Quantity (INT) OrderDate (DATE) DeliveryDate (DATE) DeliveryStatus (BIT) UserId (INT, FK)	UserId (INT, PK) UserName (VARCHAR) UserPassword (VARCHAR)

3. Main Functions

- View all active/delivered orders.
- Add and edit order details.
- View Oven operational status and temperature.
- Login as a bakery staff.

4. Login Users

There is a single Bakery Operator login, users will have to enter the username and password to log into the system.
